

Equipment

Tissue Processing:

- Microwave tissue processor Logos J
- Paraffin Embedding Station Leica EG 1150H
- Cold Plate for cooling embedding molds and paraffin blocks Leica EG 1130

Tissue Microarray (TMA) construction:

- Alphelys Tissue Array Minicore
- Tissue Sectioning:
- Fully automated Leica RM 2255 rotary microtome
- Cryostat Leica CM 1850UV

Slide staining and analysis:

- Leica ST5010 Autostainer (Hematoxylin & Eosin staining)
- Leica BOND RX fully automated autostainer (IHC, ISH, FISH)
- Aperio digital pathology slide scanner
- ZEISS Axioskop 2 plus microscope

Pathology material storage:

High density racks for glass slides and paraffin blocks
